Statistical Analysis 9: Some reliability measures Research question type: Reliability of repeated measurements What kind of variables? Continuous (scale/interval/ratio) Common Applications: A repeatability study required to help establish and quantify reproducibility, and thus provide an indication of the 'test-retest' reliability of a measurement.

Main steps in reliability analysis 1. Select a target reliability level (safety or consequence class) 2. Identify significant failure modes (deflection, bending) 3. Formulate limit state functions ($g(E,R) = M Ed - M Rd = 0$) 4. Identify stochastic variables and deterministic parameters. Specify distribution types and statistical parameters 5.

Statistical reliability is needed in order to ensure the validity and precision of the statistical analysis. It refers to the ability to reproduce the results again and again.

Statistical Reliability - Ensures Validity and Precision

Reliability refers to the extent to which a scale produces consistent results, if the measurements are repeated a number of times. The analysis on reliability is called reliability analysis. Reliability analysis is determined by obtaining the proportion of systematic variation in a scale, which ...
