In mathematics, structural stability is a fundamental property of a dynamical system which means that the qualitative behavior of the trajectories is unaffected by small perturbations (to be exact  $C^1$ -small perturbations).. Examples of such qualitative properties are numbers of fixed points and periodic orbits (but not their periods). Unlike Lyapunov stability, which considers perturbations of ...

Structural geology is the study of the three-dimensional distribution of rock units with respect to their deformational histories. The primary goal of structural geology is to use measurements of present-day rock geometries to uncover information about the history of deformation in the rocks, and ultimately, to understand the stress field that resulted in the observed strain and geometries.

1. Introduction. Transport is the second largest source of energy-related emissions, accounting for 23% in the total energy-related global emissions in 2010 (Sims et al., 2014). Global transport CO<sub>2</sub> (carbon dioxide) emissions are projected to double along with the 170%–300% increase in global transport demand by 2050 compared to the 2005 level (). ...
